

DoctoralNet Ltd's mission is to be an expert example of technology enhanced learning aid used by universities in your drive to:

- 1) Enroll students in graduate/postgraduate studies,
- 2) Raise rates of retention and completion, and
- 3) Allow equality of socialization to older, part time or students at a distance from their universities campus.
- 4) Aid university staff to increase the pace towards their own PhD completion or journal publication.

Our online platform provides two categories of on demand support for PhD (and soon research Masters) students. On the one hand, our system of interactive technology, phases, milestones and maps guides students through the complex learning processes associated with independent research. On the other, our suite of tools, emails, groups and webinars provide research based motivational aids and community. Our technology was developed in concert with retired professors, dedicated to helping doctoral students build and maintain a solid pace through to graduation.

**85% of the students in our initial pilot cohort completed degrees in education and business in 3.5 years, using technology + coaching solution.**

The DoctoralNet platform is designed to be white labeled and to reside within a variety of educational settings. Students experience these tools as residing within their university setting helping to ensure use. Milestone achievement data are reported as an aid to the university and the supervising professor.

University rates as low as \$55 per student or university staff member per year  
Rates scale with numbers enrolled

Demonstrations available upon request.
